Welcome to Against The World! Against The World is a game where you, the player, have to fight many enemies that have invaded the world to save it. Along the way, you collect powerups and even face a tough boss!

To build/compile:
Install python and go to the terminal and type

`py -3 -m pip install -r requirements.txt`

"`py -3`" may have to be replaced with "`python`" or "`python3`" depending on your OS and python installation.

Then, run

`py -3 -m pip install pyinstaller`

Next,

`pyinstaller -F -w -i icon.ico main.py`

and go to the resulting dist folder and move the main.exe file into the parent folder. Run the main.exe file and it should have compiled successfully.
